Compiler Lab

Lab Report 2

Course Title : Compiler Lab

Course Code : CSE0613322

Submitted to:

Teacher's Name	Designation
Sonia Afroz	Lecturer
Tasneen Tanvir	Lecturer

Submitted by:

Student Name : Gaus Saraf Murady

Student ID : 0432410005101088

Semester : Autumn 2026

Batch : 55

Department : CSE

Date of Submission: 15.08.26

Experiment No. : 2

Experiment Name : C++ Program for recognizing types of comments and finding number of lines in comments

1. Write a program to recognize the types of comments.

Input :

```
#include <bits/stdc++.h>
using namespace std;

int main() {

    string text;
    // cin >> text;
    getline(cin, text);
    cout << "Text Size is " << text.size() << endl;
    cout << text[text.size() - 1] << endl;
    if (text[0] == '/' && text[1] == '/') {
        cout << text << " is a Single Line Comment" << endl;
    } else if (text[0] == '/' && text[1] == '*' && text[text.size() - 2] == '*' &&
        text[text.size() - 1] == '/') {
        cout << text << " is a Multiple Line Comment" << endl;
    } else {
        cout << text << " is Not Comment" << endl;
    }

    return 0;
}
```

Output :

```
C:\Users\gsmur\Documents\c X + v
// Comment for sure
Text Size is 19
e
// Comment for sure is a Single Line Comment

Process returned 0 (0x0)   execution time : 10.001 s
Press any key to continue.
|
```

```
C:\Users\gsmur\Documents\c X + v
/* who are you */
Text Size is 18
/
/* who are you */ is a Multiple Line Comment

Process returned 0 (0x0)   execution time : 9.594 s
Press any key to continue.
|
```

```
C:\Users\gsmur\Documents\c X + v
This is a Comment
Text Size is 17
t
This is a Comment is Not Comment

Process returned 0 (0x0)   execution time : 4.202 s
Press any key to continue.
|
```

2. Write a program to find the number of lines where the comments are written.

Input :

```
#include <bits/stdc++.h>
using namespace std;

int main() {

    int n;
    cout << "How many lines to consider?\n>> ";
    cin >> n;
    cin.ignore(); // clears input buffer that ignores text[0] input
    cout << endl << "Input each line and press Enter / add Newline:\n>>\n";

    string text[n];

    int cmt_cnt = 0;

    for (int i = 0; i < n; i++) {
        getline(cin, text[i]);
        if (text[i][0] == '/' && text[i][1] == '/') {
            cmt_cnt++;
        }
    }

    cout << endl << "Total Comments: " << cmt_cnt << endl;

    return 0;
}
```

Output :

```
C:\Users\gsmur\Documents\... X + v
How many lines to consider?
>> 5

Input each line and press Enter / add Newline:
>>
Hello
I am fine
// I am not fine
// but
Alhamdulillah

Total Comments: 2

Process returned 0 (0x0) execution time : 38.645 s
Press any key to continue.
|
```
